

Saturn UV Ink Series From Universal Graphic Solutions

For printing on paper, board and synthetic substrates

Saturn UV is designed for excellent adhesion on a wide range of different non-absorbing printing substrates such as metallic foil, plastics, coated board and papers. This series can be used on sheet-fed offset printing presses with conventional UV lamps. The main areas of application are high-quality packaging and labels.

PROPERTIES

- Excellent adhesion on a range of different non-absorbing printing substrates
 - Excellent printability
 - Fast curing
 - High scratch and rub resistance
 - G7 Certified
-

HU-UV LED Process Series From Universal Graphic Solutions

A high performance low energy LED UV ink series for sheetfed presses

HU UV LED is a low energy curing ink for LED UV/ (HUV/LE/HR) lamp technologies presses. It is suitable for commercial and non-food packaging application on paper and paperboard substrates. HU-UV LED cures with as little as one LED/UV lamp, consuming less electricity.

PROPERTIES

- Low energy expenditure
- No ozone formation
- Fast, thorough hardening
- Good ink/water balance
- Suitable for all common dampening systems
- G7 Certified
